

Current Affairs - July to December 2018

Month Type

- ▶ **117** Current Affairs were found in **Last Six Months** for Type - **Science and Technology**.

Science

- ▶ NASA confirmed that there are frozen water deposits in darkest and coolest parts of Moon's Polar Regions, using data from India's Chandrayaan-I spacecraft.
 - ▶ Chandrayaan-I spacecraft was launched in 2008 by the Indian Space Research Organisation (ISRO).
 - ▶ At the southern pole of moon, most of ice is concentrated at lunar craters, while northern pole's ice is more widely and lightly spread.
 - ▶ Most of the newfound water ice lies in shadows of craters near poles, where warmest temperatures never reach above minus 156 degrees Celsius (-250 degrees Fahrenheit).
- ▶ 0.7 m GROWTH-India telescope at Indian Astronomical Observatory in Hanle (Ladakh) made its first observation. GROWTH-India is a part of multi-country collaborative initiative known as Global Relay of Observatories Watching Transients Happen (GROWTH), to observe transient events in Universe.
- ▶ 4 new species of Indian horned frogs discovered from Himalayan regions of Northeast India, by team of researchers that comprised S D Biju, famously known as the 'Frogman of India'.
 - ▶ Scientists have named them as Himalayan horned frog (*Megophrys himalayana*), Garo white-lipped horned frog (*Megophrys oreocrypta*); Yellow spotted white-lipped horned frog (*Megophrys flavipunctata*) and Giant Himalayan horned frog (*Megophrys periosa*).
- ▶ GSAT-29 communication satellite successfully launched by Geosynchronous Satellite Launch Vehicle MarkIII (GSLV MkIII-D2) from Satish Dhawan Space Centre (SDSC) SHAR Sriharikota (Andhra Pradesh).
 - ▶ GSAT-29 satellite weighed 3423-kg.
 - ▶ GSLV Mk III is a three-stage heavy lift launch vehicle developed by the Indian Space Research Organisation (ISRO).
- ▶ A Massive underground lake has been detected for first time on Mars, discovered by European Space Agency's Mars Express orbiter (launched in 2003). It is about 20 kilometres wide, located under a layer of Martian ice and is largest body of liquid water ever found on Red Planet.
 - ▶ It lies almost 1.5 km beneath the icy surface and water is not drinkable. Tool that detected this is called Mars Advanced Radar for Subsurface and Ionosphere Sounding (MARSIS).
- ▶ A group of Russian and Princeton University (USA) scientists revived a pair of frozen roundworms that were 32,000 and 41,700 years old and were found buried in Siberia. Around 300 prehistoric worms were defrosted and brought to 20°C. After weeks of cultivation, two nematodes reportedly showed signs of life by starting to move and eat.
- ▶ A new Clot buster, PEGylated Streptokinase - a Novel Biological Entity developed by CSIR (Council of Scientific & Industrial Research) has been developed, to revolutionize treatment of ischemic strokes, a condition caused by a dysfunction in the supply of blood to the brain. Prevalence of stroke is much higher in India than West and about 87% of all strokes are ischemic strokes.
 - ▶ CSIR-IMTECH and Epygen Biotech Mumbai signed an agreement to develop PEGylated Streptokinase for treatment of Ischemic Stroke.
 - ▶ PEGylated Streptokinase (novel recombinant protein Thrombolytic molecule) is engineered for enhanced proteolytic stability and extended plasma half-life, with reduced immuno-reactivity which would have significant clinical advantages.
- ▶ A new deep-sea shark species named Pygmy false catshark discovered in northern Indian Ocean, as first such discovery in India since Mangalore hound shark in 2011. Scientific name of species is *Planonassus indicus* - 'planus' meaning flat and 'nassus' meaning nose.

9. ▶ A rare blood group named “pp” or “P null” phenotype has been identified by doctors from Kasturba Medical College (KMC) in Mangaluru, Karnataka. ABO and Rh D are the most common blood group systems. Doctors confirmed that a needy patient’s cells contained rare “pp” phenotype, making it first time that P blood group null phenotype is detected in India.
10. ▶ A swimming pool type research reactor *Apsara-upgraded* became operational in Trombay campus of Bhabha Atomic Research Centre.
 - ▶ *Apsara*, first research reactor in Asia became operational in Trombay campus of Bhabha Atomic Research Centre in August 1956. After providing more than five decades of dedicated service to the researchers, the reactor was shut down in 2009.
 - ▶ The Upgraded version uses plate type dispersion fuel elements made of Low Enriched Uranium (LEU). By virtue of higher neutron flux, this reactor will increase indigenous production of radio-isotopes for medical application by 50 % and would also be extensively used for research in nuclear physics, material science and radiation shielding.
11. ▶ According to a new study by BirdLife International, 8 avian species was declared “extinct” in this decade. It was carried out to analyse 51 Critically Endangered birds six statistical methods to assign to the IUCN Red List Category to determine which of them qualify as ‘potentially extinct’ and ‘extinct’. 5 of 8 extinctions were from the South American mainland due to deforestation resulting in habitat loss.
12. ▶ Aditya-L1, India’s first mission to study solar corona, will be launched in 2019-2020, by Polar Satellite Launch Vehicle (PSLV-XL).
 - ▶ Aditya – L1 will be inserted in a halo orbit around the Lagrangian point 1 (L1), 1.5 million km from Earth. Solar corona is outer layers of the Sun.
 - ▶ Lagrangian point where attraction by Sun and Earth becomes equal. This point does not experience gravitational force. It will observe Sun’s Photosphere and Chromosphere and will also conduct additional experiments.
 - ▶ It will have 6 additional payloads -
 - ▶ Visible Emission Line Coronagraph (VELC)– to study the diagnostic parameters of solar corona and dynamics and origin of Coronal Mass Ejections.
 - ▶ Solar Ultraviolet Imaging Telescope (SUIT)– to image the Solar Photosphere and Chromosphere in near Ultraviolet (200-400 nm) and measure solar irradiance variations.
 - ▶ Aditya Solar wind Particle Experiment (ASPEX) – to study the variation of solar wind properties and its distribution and spectral characteristics.
 - ▶ Plasma Analyser Package for Aditya (PAPA)– to understand the composition of solar wind and its energy distribution.
 - ▶ Solar Low Energy X-ray Spectrometer (SoLEXS)– to monitor the X-ray flares to study the heating mechanism of solar corona.
 - ▶ High Energy L1 Orbiting X-ray Spectrometer (HEL1OS)– to observe the dynamic events in the solar corona and estimate the energy used to accelerate the particles during eruptive events.
 - ▶ Magnetometer– to measure the magnitude and nature of the Interplanetary Magnetic Field.
13. ▶ American Pharmaceutical Company Abbott will introduce a high-sensitive troponin-I blood test in India, that can predict chances of a heart attack or other cardiac event months to years in advance.
 - ▶ Troponin-I test provides better predictive information for determining a person’s chances of developing future heart disease when added to current standard of care.
14. ▶ As a first such mission, European and Japanese space agencies launched Bepi Colombo spacecraft, for a joint mission to Mercury, planet closest to the sun. Spacecraft will arrive at Mercury in 2025.
 - ▶ It has named after Italian scientist Giuseppe "Bepi" Colombo. During its 5.2 billion miles journey, spacecraft will several fly-bys of Earth, Venus and Mercury, to slow down enough to avoid huge gravitational pull of Sun.
15. ▶ As per a study published in journal Royal Society Open Science, Dracula ant possesses fastest animal movement on record, With speeds of up to 90 metres per second / 200 miles per hour.
16. ▶ Australian researchers have announced that they have developed a new technique to detect early-stage cancer tumour cells in the blood through malaria protein VAR2CSA. In this, VAR2CSA sticks to cancer cells and helps detect more number of cancer cells than before.
17. ▶ Australian scientists at Edith Cowan University (ECU) have developed world’s first blood test capable of detecting melanoma in its early stages, the most dangerous form of skin cancer.
18. ▶ CSIR Indian Institute of Toxicology Research (CSIR-IITR) Lucknow has developed an innovative technology for “Drinking Water Disinfection System” with Trade name “Oneer™”, transferred to Bluebird Water Purifiers.
 - ▶ This system will provide safe and clean drinking water at a cost of just 2 Paise / Ltr. Community level model is of 450 LPH capacity which can be scaled up to 5000 to 1 lakh L/day.
 - ▶ Smaller unit of Oneer is particularly suitable for homes, street food vendors, and small establishments.
19. ▶ China has built an ‘artificial sun’ that reaches 6 times temperature of Sun’s core of 15 million °C. Scientists from China’s Institute of Plasma Physics announced that plasma in their Experimental Advanced Superconducting Tokamak (EAST) also called ‘artificial sun’, reached 100 million °C, temperature required to perform nuclear fusion on Earth.

20. ▶ China launched Chang'e 4, first-ever spacecraft that will attempt landing on far side of Moon, which always shows the same face to Earth as it's close enough to be locked by planet's gravitational field.
21. ▶ China will launch a 300-satellite array known as *Hongyan constellation*, with 1st launch scheduled in end of 2018. The constellation will provide worldwide communication services, allowing a mobile phone to be connected anywhere on planet, including remote deserts or middle of an ocean.
 - ▶ Low-orbit satellites have stronger signals and a shorter signal delay than synchronous orbit satellites, which are 36,000 kilometers above equator.
22. ▶ Delhi government approved delinking Aadhaar number and Aadhaar-linked bank accounts for availing old age, disability and widow pensions. It will pay at old rates all pensions halted due to lack of Aadhaar
23. ▶ Facebook has developed an artificial intelligence (AI) system 'Rosetta' which can detect text from over a billion images like memes and videos in real time. It detects rectangular regions in images that contain text and then uses a neural network to recognise and transcribe what's written.
24. ▶ German Researchers created world's first rhino embryos in a test tube to save near-extinct northern white rhinos, which has only two females alive globally. For this, team fertilised southern white rhinos' eggs with dead northern white rhinos' sperm.
25. ▶ German firm BigRep produced the world's first fully functioning e-motorbike NERA using a 3D printer. NERA has features like airless tires, embedded electronics, and forkless steering.
26. ▶ Germany rolled out world's first hydrogen-powered passenger train, manufactured by French TGV-maker Alstom. These locomotives named *iLint trains* emit zero emissions, offering greener and quieter alternative to diesel on non-electrified railway lines.
 - ▶ Hydrogen trains are equipped with fuel cells that produce electricity by combining hydrogen with oxygen. This conversion process only emits steam and water, thus producing zero emissions.
 - ▶ Excess energy produced is stored in ion-lithium batteries on board train. Hydrogen fuel cells have advantages over batteries. Instead of recharging, they can easily be refueled like gas or diesel engine.
 - ▶ These trains can run for around 1,000 km on a single tank of hydrogen, similar to the range of diesel trains.
27. ▶ Google developed a new Artificial Intelligence (AI) technology to combat online spreading of contents involving child sexual abuse, using deep neural networks for image processing to help discover and detect child sexual abuse material (CSAM) online. Quick identification of new images will lead to quicker identification of children, who are being sexually abused and will help protect them from further abuse.
28. ▶ IIT Hyderabad Researchers developed smartphone-based system to detect adulteration in milk. This could be done by using an indicator paper that changes colour according to acidity which further can be incorporated with algorithms on a smartphone to accurately detect colour change.
29. ▶ ISRO conducted its first PAT (pad abort test), through Crew Escape System that provides an escape mechanism for astronauts if the launch operation is aborted. Once deployed, India will become 4th nation (after USA, Russia and China), to have human space flight programmes.
 - ▶ Only Indian to ever travel to space was fighter pilot Rakesh Sharma who flew aboard Soyuz T-11, a spacecraft of the former USSR in 1984. India currently does not have a human space flight programme.
30. ▶ ISRO postponed Chandrayaan-2, India's second mission to moon to January 3, 2019, as 2nd time the mission is postponed. Chandrayaan 2 is advanced version of Chandrayaan-1 mission (launched in 2008) which only involved orbiting around moon.
 - ▶ Chandrayaan-2 involves an orbiter, lander and rover. In this, ISRO will for first time attempt to land rover on moon's south-pole. It involves soft-landing on lunar surface and rover that will walk and analysis content on moon's surface. It will be launched on board of Geosynchronous Satellite Launch Vehicle Mk III (GSLV-F10).
 - ▶ Soft-landing on moon surface will be most complex part. Only US, Russia and China have been able to soft-land spacecraft on lunar surface.
 - ▶ Space Commission also approved ISRO's proposal of naming Chandrayaan-2 lander 'Vikram' after Vikram Sarabhai, father of Indian space programme.
31. ▶ ISRO successfully conducted ground test of its high thrust version of Vikas Engine at ISRO Propulsion Complex (IPRC) in Mahendragiri (Tamil Nadu).
 - ▶ Vikas belongs to family of liquid fuelled rocket engines conceptualized and designed by ISRO's Liquid Propulsion Systems Centre in 1970s. It is workhorse liquid rocket engine powering second stage of PSLV, second stage and four strap on stages of GSLV and is part of first stage twin engine core liquid stage (L110) of GSLV Mk-III.
 - ▶ Tested high thrust version of Vikas engine will improve payload capability of PSLV, GSLV and GSLV Mk-III launch vehicles.
32. ▶ ISRO will launch Centauri I satellite later this year, which is a 10-kg nano-satellite made by Indian IOT startup Fleet Space Technologies.

33. ▶ ISRO will set up a satellite ground control station at the North Pole for a “14-orbit coverage” to efficiently download data from India’s Earth-observing satellites. ISRO already has two ground stations, IMAGES at Telangana Shadnagar built in 2011, and AGEOS in Antarctica.
- ▶ Also, ISRO announced to conduct 19 missions, including 10 satellites and nine launch vehicles, in next seven months between September and March. It will include the launch of India’s second moon mission Chandrayaan-2 in Jan 2019.
34. ▶ India and France have signed agreement to collaborate for ISRO’s first human space mission Gaganyaan to be launched in 2022. The announcement was made 6th edition of Bengaluru Space Expo (touted to be largest space conference in Asia and held in Bengaluru).
- ▶ ISRO and French space agency CNES will form working group to exchange expertise in fields of astronaut life support, radiation protection, space debris protection and personal hygiene systems among others.
 - ▶ During same event, ISRO displayed a space suit developed for Gaganyaan Mission 2022. It is an orange-coloured prototype space suit developed at Vikram Sarabhai Space Centre in Thiruvananthapuram. It can hold one oxygen cylinder, allowing an astronaut to breathe in space for 60 minutes.
 - ▶ ISRO also displayed a crew model and crew escape model, with thermal shield and temperature inside maintained at 25 degree Celsius.
 - ▶ Gaganyaan Mission astronauts will be living for five to seven days in a 400-km orbit from the Earth’s surface as they would conduct micro-gravity experiments.
 - ▶ Theme for Bengaluru Space Expo 2018 was *Creating dynamism in Indian space ecosystem*.
35. ▶ India launched its latest communication satellite, GSAT-7A aboard Geosynchronous Satellite Launch Vehicle (GSLV-F11) from Satish Dhawan Space Centre at Sriharikota (Andhra Pradesh).
- ▶ GSAT-7A is 39th Indian communication satellite of ISRO to provide services to the users in Ku-band over Indian region. It weighs 2250 KG.
 - ▶ GSAT-7A satellite is the heaviest satellite (2250 kgs) with an indigenously developed cryogenic stage that has been launched by GSLV.
36. ▶ India will launch 2 Satellite Indian Data Relay Satellite System (IDRSS) As a part of its proposed manned space mission, to improve data relay and communication links with its remote sensing/earth observation satellites.
- ▶ IDRSS will reduce the dependence on the ground stations in tracking satellites. Communication and data transfer would be in real time as remote sensing satellites can relay data gathered to IDRSS satellites which in turn can transmit them to the ground.
 - ▶ IDRSS will be like a hub as it can receive commands from the ground stations and in turn relay the same to other satellites.
37. ▶ India’s Ranjit Srivastava (Ranchi) has developed Rashmi, India’s first humanoid robot, which can speak Hindi, Bhojpuri, Marathi and English. Rashmi uses linguistic interpretation (LI), artificial intelligence (AI), visual data and facial recognition systems.
38. ▶ Indian American Mahum Siddiqi won inaugural “Digital Transformation Hackathon” at Cornell University in USA, for designing a device which can detect actual level of pain of a patient during a diagnosis.
39. ▶ Indian Council for Agricultural Research (ICAR) discovered an invasive agricultural pest Fall Armyworm (*Spodoptera frugiperda*) in Karnataka. A major maize pest in North America, *Fall Armyworm* arrived in Africa in 2016. The pest feeds on around 100 different crops, such as vegetables, rice, and sugarcane and it spreads in no time. Karnataka finding is the first report of the pest in Asia.
40. ▶ Indian Institute of Technology (IIT)-Madras commissioned world’s first remotely operable Local Electrode Atom Probe (LEAP) microscope, which is operatable through special terminal by researchers divided geographically. LEAP can provide a precise atom-by-atom view of materials, providing atomic-scale insights into metallic.
41. ▶ Indian Space Research Organisation (ISRO) issued announcement of opportunity (AO) to international space scientists to propose their scientific payloads to be carried on its mission to Venus planned for 2023.
42. ▶ Indian Space Research Organisation (ISRO) successfully launched its PSLV-C42 rocket carrying two British Earth observation satellites - NovaSAR and S1-4, intended to improve UK’s disaster management capabilities.
43. ▶ Indian Space Research Organisation (ISRO)’s heaviest satellite so far - GSAT-11 (weighing over 5700 kg), will take off a spaceport in French Guiana on 30 November. GSAT-11 is capable of providing high bandwidth connectivity with up to 14 GB per second data transfer speed.
- ▶ ISRO will also launch incubators across India to support startups working on building newer solutions in rocketry, communication satellites and applications based on remote sensing data.
44. ▶ Indian Space Research Organisation’s (ISRO) Launched its heaviest and most-advanced high throughput communication satellite GSAT-11, from Spaceport in French Guiana (South America), on board Launch vehicle Ariane 5 VA-246. It also carried South Korea’s GEO-KOMPSAT-2A satellite.

- ✎ The 5,854-kg GSAT-11 will provide high data rate connectivity to users of Indian mainland and islands through 32 user beams in Ku-band and 8 hub beams in Ka-band. It will boost broadband connectivity to rural and inaccessible areas in India.
 - ✎ GSAT-11 was launched from French Guiana as its heaviest satellite of ISRO (5.86 ton) and cannot be carried by ISRO's GSLV Mk – III which has capacity to lift only up to four-ton class payloads.
45. ▶ Indian Space Research Organisation's (ISRO) Polar Satellite Launch Vehicle (PSLV-C43) launched 31 satellites from Satish Dhawan Space Centre (SDSC) in Sriharikota (Andhra Pradesh).
- ✎ It Included India's Hyper-Spectral Imaging Satellite (HysIS) and 30 foreign satellites. HysIS is an earth observation satellite built around ISRO's Mini Satellite2 (IMS-2) bus weighing about 380kg. The mission life of the satellite is five years. Primary goal of HysIS is to study the earth's surface in both visible, near infrared and shortwave infrared regions of the electromagnetic spectrum.
 - ✎ Foreign Satellites belonged to Australia (1), Canada (1), Columbia (1), Finland (1), Malaysia (1), Netherlands (1), Spain (1) and USA (23). Satellites from Australia, Columbia, Malaysia and Spain were flown aboard PSLV for the first time.
 - ✎ In December 2018, ISRO has 2 more planned launches - GSAT 11 from French Guiana and GSAT 7A from Sriharikota. Next year, ISRO will have its long expected second mission to moon, Chandrayaan – II. GSAT-11 is being launched from French Guiana as its heaviest satellite of ISRO (5.86 ton) and cannot be carried by GSLV Mk – III which has the capacity to lift only up to four-ton class payloads.
46. ▶ Indian Space Research Organization (ISRO) unveiled details of its first indigenous human space mission dubbed as Gaganyaan to be launched in 2022, announced by PM Narendra Modi during his 72nd Independence Day speech.
- ✎ Indian Space Research Organisation (ISRO) will outsource production of the Polar Satellite Launch Vehicles (PSLV) and Small Satellite Launch Vehicles (SSLVs) to private Industries.
 - ✎ 3 Indian astronauts will be taken to space on board Gaganyaan spacecraft by 2022, as first human space mission to be indigenously developed by ISRO.
 - ✎ India will become fourth nation in the world to send astronaut into space after US, Russia and China.
 - ✎ Rakesh Sharma was first Indian to travel to space, as part of the Soviet Union's Soyuz T-11 expedition, launched on April 2, 1984, of the Intercosmos programme.
 - ✎ Cost of Gaganyaan mission will be less than Rs 10,000 crore. Prior to actual launch, ISRO will launch two unmanned Gaganyaan missions (first in 30 months' time and then 36 months).
 - ✎ GSLV Mk-III launch vehicle will be used to launch Gaganyaan as it has necessary payload capability for mission.
 - ✎ ISRO also announced to outsource production of the Polar Satellite Launch Vehicles (PSLV) and Small Satellite Launch Vehicles (SSLVs) to private Industries.
47. ▶ India's Mars mission Mangalyaan, successfully completed four years around Mars, despite being designed to last only six months. ISRO inserted Mangalyaan into Mars' orbit in its first attempt on September 24, 2014.
- ✎ Also, ASTROSAT, India's first multi-wavelength space observatory will complete 3 years in Earth's orbit (Launched on September 28, 2015). ASTROSAT has helped scientists confirm the presence of younger stars in globular clusters, earlier believed to contain only old stars.
48. ▶ India's biggest cyclotron facility named Cyclone-30 became operational at Department of Atomic Energy (DAE)'s Kolkata-based Variable Energy Cyclotron Centre (VECC).
- ✎ Cyclotron is used to produce radioisotopes for diagnostic and therapeutic use for cancer care. Radiations from these isotopes are used to destroy cancer cells.
 - ✎ Cyclone-30 will produce radioisotopes vital for diagnosis and treatment of cancer. It will be only cyclotron facility in country to produce Germanium 68 radioisotopes, used in diagnosis of breast cancer.
 - ✎ It will also produce Palladium 103 isotopes, which is used for the treatment of prostate cancer. In its future stages, it will also produce Iodine 123 isotopes, which can help detect thyroid cancer.
49. ▶ India's first biofortified sorghum (jowar) named Parbhani Shakti containing higher iron and zinc than regular sorghum was formally launched, named Parbhani Shakti (ICSR 14001), developed by International Crops Research Institute for the Semi-Arid-Tropics (ICRISAT). It was released for cultivation by Vasantrao Naik Marathwada Krishi Vidyapeeth (VNMKV), Maharashtra.
50. ▶ India's first captive-born Humboldt Penguin named Freedom Baby died barely a week after it was born at Veermata Jijabai Bhosale Udyan and Zoo (Byculla zoo) (Maharashtra). It was named Freedom Baby as it was born on Independence Day. It was the first Humboldt Penguin to born in captivity in India.
- ✎ Byculla zoo imported 8 Humboldt Penguins from South Korea in July 2016, kept thereafter in special enclosure where average temperature of 16-18 degrees celsius is maintained.

-  Humboldt penguin is named after the cold water current (Humboldt current) it swims in. It is native to South America and breeds in coastal Chile and Peru.
51. ▶ India's first underwater robotic drone – Eyerov TUNA handed over to Naval Physical and Oceanographic Laboratory (NPOL) of DRDO, as first commercial Remotely Operated Vehicle (ROV) / underwater drone. It would be used by NPOL for research and development activities for defence purposes.
52. ▶ Institute of Nuclear Medicine and Allied Sciences (INMAS) developed India's first indigenous medical kit for protection against nuclear warfare or radioactive leakage. It has 25 items which include radioactive protectors which can absorb 80-90% of radiation, nerve gas agents, bandages that absorb radiation as well as tablets and ointments. Its important parts are -
-  Prussian blue tablet - Highly effective in incorporating Radio Cesium (Cs-137) and Radio Thallium, among most feared radioisotopes in nuclear bombs that destroy human body cells.
 -  Ethylenediaminetetraacetic acid (EDTA) injection - Traps uranium in the guts and blood of victims during a nuclear accident or warfare.
 -  Ca-EDTA Respiratory Fluid - Inhalation formula for chelation, or grabbing of heavy metals and radioactive elements deposited in lungs through inhalation at nuclear accident sites. It reduces the body burden of radioactivity by 30-40% in controlled conditions.
 -  Radioactive Blood Mopping Dressing - Special bandage that absorbs radiation to prevent spread of radiation from radioactive patients to others.
 -  Radioactive urine/biofluid collector - It can safely dispose of urine of person affected by radiation.
 -  Anti-gamma ray skin ointment - Heals radiation damage on skin.
 -  Amifostine injection - This conventional radiopharmaceutical that limits damage from gamma radiation.
 -  Indranil 150 mg tablet.
53. ▶ Mars made its closest approach to the Earth on July 31, 2018. At a distance of 57.6 million km, it was closest since 2003. In 2003, Mars was closest in nearly 60,000 years, at 55.7 million km, which won't be repeated until 2287.
54. ▶ Ministry of Earth Sciences announced that Century's (2001 AD to 2100 AD) longest total lunar eclipse of 1 hour 43 minutes will occur on July 27-28, 2018, to be visible from all parts of India.
-  Moon will be gradually covered by Earth's shadow and totality phase will begin on July 28 and total eclipse will last up to 2h 43m.
 -  Longest Total Lunar Eclipse - Moon will be passing through central part of Earth's umbral shadow. During this, Moon is located at apogee (farthest from Earth) and will be moving at slower speed in its orbit. It will take longer time for Moon and greater distance of Earth's umbral shadow to travel, making it longest duration of total eclipse of century.
 -  Such long duration of total lunar eclipses earlier had occurred on July 16, 2000 for totality duration of 1 hour 46 minutes.
55. ▶ Most-distant object ever observed in our solar system known as 2018 VG18 and nicknamed "Farout," has been discovered by American scientists. It is the first to be observed at a distance of more than 100 AU (astronomical units) which almost 120AU or 11 billion miles from the sun.
56. ▶ Mumbai-based automaker Vazirani Automotive unveiled India's first turbine-electric hypercar called 'Vazirani Shul' at 2018 Goodwood Festival of Speed. The car is essentially an all-wheel-drive with four individual motors for each wheel, hence enabling torque vectoring.
57. ▶ NASA announced that first crewed test flight by a SpaceX rocket to ISS will take place in June 2019. SpaceX will use its Falcon 9 rocket for launch with a Crew Dragon capsule attached on top.
58. ▶ NASA designed 2 virtual reality applications named NASA Selfies and NASA's Exoplanet Excursions, to celebrate 15th anniversary of the Spitzer Space Telescope.
-  NASA Selfies app users can take selfies in a virtual spacesuit and can pose in front of various cosmic locations.
 -  NASA's Exoplanet Excursions takes the users on a virtual guided tour of the TRAPPIST-1 planetary system.
59. ▶ NASA detected signs of water above Jupiter's Great Red Spot, a storm that has been persistent for more than 350 years. The pressure of water combined with measurements of carbon monoxide, show that Jupiter has 2 to 9 times more oxygen than Sun.
60. ▶ NASA discovered 12 new moons around Jupiter, where one of them is on a collision course which could create a crash large enough to be visible from Earth. This brings total number of Jovian moons to 79, most for any planet.
61. ▶ NASA has retired Kepler space telescope after it ran out of fuel needed for further science operations, bringing end of 9.5 year mission of Kepler space telescope in which it had discovered over 2,600 intriguing exoplanets from outside our solar system some.
-  It was launched in 2009 on 3.5-year mission, but operated for 9 years. It was NASA's first planet-hunting mission. It was named after German mathematician and astronomer Johannes Kepler.
62. ▶ NASA launched VISIONS-2 (*Visualizing Ion Outflow via Neutral Atom Sensing-2*) rocket to get a closer look at how earth's atmosphere is leaking into space. It has several applications including predicting which planets might be habitable.

63. ▶ NASA launched its most advanced space laser, ICESat-2, a \$1-billion mission that will shoot lasers towards Earth to track changes in Earth's ice sheets, glaciers, sea ice and vegetation around the world. The preceding mission, ICESat, which lasted from 2003-2009 revealed that ice cover was disappearing from Greenland and Antarctica. The new laser will fire 10,000 times per second, whereas ICESat fired 40 times a second.
64. ▶ NASA's (National Aeronautics and Space Administration) Parker Solar Probe, the first mission to touch the Sun, successfully completed a flyby of Venus at a distance of 2,415 km during its first gravity assist from Venus.
- ▶ Remaining 6 Venus gravity assists will happen during 7-year mission.
 - ▶ Parker Solar Probe was launched on August 12, 2018, on a 7-year journey to study the Sun's outer atmosphere and its impacts on space weather.
65. ▶ NASA's First asteroid sampling spacecraft OSIRIS-REx captured first images of its target asteroid Bennu (from a distance of 2.1 million KMs) and began its final approach towards it after almost two-year journey.
- ▶ OSIRIS-Rex stands for Origins, Spectral Interpretation, Resource Identification, Security-Regolith Explorer. kilometre. It was launched in September 2016 for studying 101955 Bennu, a carbonaceous asteroid.
 - ▶ It is scheduled to reach asteroid in 2018 and return to Earth after collecting some of its gravels by 2023.
 - ▶ Bennu is near-Earth carbonaceous asteroid about the size of a small mountain in the Apollo group. It was discovered in September 1999 by the LINEAR Project. It is carbon-rich asteroid and believed to be the type of asteroids that may have chemical building blocks of life, along with lots of water.
66. ▶ NASA's Focusing Optics X-ray Solar Imager (FOXSI) took its third flight from the White Sands Missile Range in White Sands, New Mexico.
- ▶ It is first instrument built specially to image high-energy X-rays from Sun, that will capture nanoflares (miniature explosions invisible to naked eye).
 - ▶ First FOXSI flight was in 2012, during which it successfully viewed a small solar flare in progress, and its second in 2014, when it detected best evidence at the time of X-ray emission from nanoflares.
67. ▶ NASA's InSight spacecraft landed on Mars after 7 months of Launch, 458-million-kilometre journey, and a 6.5-minute intense parachute descent through MARS atmosphere. It marks 8th successful MARS Landing for NASA.
68. ▶ NASA's Parker Solar Probe, mission to get closest to Sun than ever by any human-made object has got its revolutionary heat shield "Thermal Protection System or TPS" permanently attached to spacecraft.
- ▶ Parker Solar Probe will be launched in August 2018, after been in making for 60 years. Spacecraft's orbit will carry it to within 4 million miles of Sun's surface with the help of its heat shield, and will collect data about the inner workings of the corona.
 - ▶ Heat shield's diameter is 8 feet and weighs 72.5 KG.
 - ▶ As Probe approaches Sun, temperatures on heat shield will reach around 1,371 degrees Celsius. But, spacecraft and its instruments will be maintained at a relatively comfortable temperature of nearly 29.4 degrees Celsius.
 - ▶ Sun-facing side of heat shield is sprayed with a specially formulated white coating to reflect most of Sun's energy away.
 - ▶ Parker Solar Probe will travel at a speed of 69,2018 km per hour at its closest approach to Sun.
69. ▶ NASA's Transiting Exoplanet Survey Satellite (TESS) become operational, after its launch in April 2018. It will look for potential exoplanets in a strip of sky running from the far south to near equator.
- ▶ TESS mission is led by Massachusetts Institute of Technology's (MIT) Kavli Institute for Astrophysics and Space Research.
 - ▶ It is designed to find potential planets orbiting stars close to Earth. It will identify such planets by spotting decreased brightness of stars after planet passes in front of it.
 - ▶ It is successor to Kepler, space observatory which is responsible for detecting most of the currently known exoplanets.
 - ▶ TESS will be able to observe about 85% of sky over its expected two-year mission.
 - ▶ Data collected by TESS will help to study mass, size, density and orbit of large cohort of small planets, including sample of rocky worlds in habitable zones (goldilocks zone) of their host stars.
70. ▶ NASA's Transiting Exoplanet Survey Satellite, known as TESS, has spotted "hot Earth" and "super-Earth" planets in solar systems 49 and 60 light-years away, marking its first discovery since April launch. TESS is designed to build on the work of its predecessor, Kepler space telescope, which discovered over 2,500 confirmed exoplanets in 20 years and is now running out of fuel.
71. ▶ NASA's new Mars lander InSight has set up its first instrument on planet Mars, a quake monitor (seismometer) that will listen for quakes and wobbles. It is first time that a scientific instrument has ever been placed on another planet's surface. InSight will also put a wind cover over the seismometer next month and initiate a new experiment.
72. ▶ National Aeronautics and Space Administration (NASA)'s Voyager 2 probe is on its way outside the influence of the Sun and it could be close to interstellar space. It was launched on August 21, 1977. Voyager 2 could be 2nd space probe to reach interstellar space after Voyager

1 which crossed into interstellar space in 2014.

73. ▶ National Board for Wildlife (NBWL) added 4 species (*Northern River Terrapin*, *Clouded Leopard*, *Arabian Sea Humpback Whale* and *Red Panda*) into Centre's Recovery Programme for Critically Endangered Species.
- ▶ Northern River Terrapin - Species of riverine turtle found in rivers that flow in Eastern India.
 - ▶ Clouded Leopard - Found in Himalayan foothills. It is threatened due to habitat loss, poaching for its skin and is also as a live pet trade.
 - ▶ Arabian Sea Humpback Whale - Migrates from Oman coast through Arabian sea, along Indian coasts till Sri Lankan coast.
 - ▶ Red Panda - Closely associated with montane forests with dense bamboo-thicket. It is found in Sikkim, West Bengal and Arunachal Pradesh.
74. ▶ National Wildlife Genetic Resource Bank inaugurated at Centre for Cellular and Molecular Biology's (CCMB) Laboratory of Conservation of Endangered Species (LaCONES) facility in Hyderabad (Telangana), as India's first genetic resource bank where genetic material will be stored for posterity which will further the cause of conservation of endangered and protected animals.
- ▶ It is equipped with sophisticated equipment to preserve the genetic resources that could be utilised to virtually resurrect an animal species in case it goes extinct. It will cryopreserve living cell lines, gametes and embryos of endangered wild animal species in India.
75. ▶ Researchers at Shizuoka University (Japan) developed a space elevator, a miniature version on satellites.
- ▶ 2 ultra-small cubic satellites will be used for demonstration, being released from International Space Station (ISS) and container acting like elevator car will be moved on cable connecting satellites using motor. The movement of motorised elevator box will be monitored with cameras in the satellites.
 - ▶ Space elevator is a proposed type of planet-to-space transportation system. It will permit vehicles to travel along cable from planetary surface, such as Earth's, directly into space or orbit, without use of large rockets. The idea of space elevator was first proposed in 1895 by Russian scientist Konstantin Tsiolkovsky.
76. ▶ Researchers at University of Oxford (UK) developed a new technology that can detect patients with the risk of deadly heart attacks, well in advance. It uses a new biomarker named the Fat Attenuation Index (FAI). It analyzes computed tomography (CT) images of fat around arteries to detect the inflamed plaques that can cause heart attacks.
77. ▶ Researchers discovered seven new wasp species belonging to the genus *Clistopyga* from Peru, Venezuela and Colombia. Most notable among is *Clistopyga crassicauda*, named after its distinctly thickened ovipositor, a tube-like organ present in many insects that helps in laying eggs and also in injecting venom.
78. ▶ Researchers found that Aspirin which is an affordable and globally available drug could help prevent HIV transmission. They tested the effect of acetylsalicylic acid or aspirin and other anti-inflammatory drugs on HIV target cells. It showed that Aspirin was the most effective as it reduced number of HIV target cells.
79. ▶ Researchers from China's Centre for Excellence in Molecular Plant Sciences created the world's first single-chromosome yeast, while not affecting the majority of its functions. Experiment was conducted on Brewer's yeast having 16 chromosomes and which shares its one-third genome ancestry with humans. Researchers were able to fit nearly all genetic material of Brewer's yeast into just one chromosome.
80. ▶ Researchers from City University of Hong Kong (CityU) developed world's first-ever 4D printing for ceramics that can be used to create complex, shape-changing objects.
- ▶ 4D printing is conventional 3D printing combined with the additional element of time as the fourth dimension, where printed objects can re-shape or self-assemble themselves over time with external stimuli, such as mechanical force, temperature, or a magnetic field.
 - ▶ Existing 3D-printed ceramic precursors, which are usually difficult to deform, also hinder the production of ceramics with complex shapes. To overcome these, researchers developed a novel 'ceramic ink', a mixture of polymers and ceramic nanoparticles.
 - ▶ Applications include Printed ceramic precursors can be used in manufacturing of electronic devices. Ceramic materials have much better performance in transmitting electromagnetic signals than metallic materials.
 - ▶ The artistic nature of ceramics and their capability to form complex shapes also provide the potential for consumers to tailor-make uniquely designed ceramic mobile phone back plates.
81. ▶ Researchers from Indian Institute of Technology (IIT) Madras developed first of family of six industry-standard microprocessors under Project Shakti. The initial batch of 300 chips have been named RISECREEK and have been fabricated at Intel's facility at Oregon, US for free to run Linux operating system.
82. ▶ Researchers from Massachusetts Institute of Technology (USA) developed a wireless 'in-body GPS' system that can track tumours and pinpoint location of ingestible implants inside body. In tests conducted on animals, system called 'ReMix' was found to be able to track implants with centimetre-level accuracy. It could be used to deliver drugs to specific regions in the body, and ease up the healing process.
83. ▶ Researchers from National Autonomous University of Mexico (UNAM) developed a hybrid chayote fruit from two wild Mexican species, which can battle cancer. Raw extract of this fruit is as effective as Cytarabine, a medication used to treat some types of cancer.

- Also, Mycological Laboratory of Goa university announced discovery of a new pigment from local wild mushrooms that may help fight cancer. The pigment has been declared as world's first sulphur-rich edible melanin.
84. ▶ Researchers from University of Minnesota (USA) found a way to 3D print light receptors on a curved glass surface in a medical technology which could be used to produce a 'bionic eye'.
85. ▶ Researchers from over 20 nations have first time have decoded wheat genome, with highest quality genome sequence generated to date for such wheat variety. Reference genome decoded covers 94% (14.5 Gb) of decoding of Chromosome 2A of wheat genome.
- It will help to identify genes controlling complex agronomic traits such as yield, grain quality, resistance to diseases and pests as well as tolerance to drought, heat, water logging and salinity.
 - Availability of high quality reference genome will accelerate breeding of climate-resilient wheat varieties to feed ever-increasing world population and help address global food security in decades to come.
86. ▶ Scientists approved three new ages on geologic time scale of Holocene Epoch - Meghalayan Age, Middle Holocene Northgrippian Age and Early Holocene Greenlandian Age.
- These new ages of Holocene Epoch are represented by wealth of sediments that accumulated worldwide on sea floor, on lake bottoms, as glacial ice, and as calcite layers in stalactites and stalagmites.
 - Meghalayan Age -
 - Named after cave in Indian state of Meghalaya. It helped to define climatic events 4,200 years ago, marking beginning of phase that continues till today. Meghalayan Age was part of longer period known as Epoch, which reflects everything that has happened over past 11,700 years.
 - It began with mega global drought that devastated ancient agricultural civilisations from Egypt to China. Droughts over 200-year period resulted in human migrations in Egypt, Syria, Palestine, Mesopotamia, Greece, Indus valley and Yangtze river valley.
 - Middle Holocene Northgrippian Age and Early Holocene Greenlandian Age -
 - These 2 ages are defined with beginnings at climatic events that happened about 8,300 years and 11,700 years ago, respectively.
 - Lower boundary of Greenlandian and Northgrippian stages are defined at specific levels in Greenland ice cores.
87. ▶ Scientists at European Southern Observatory (ESO) discovered a galaxy proto-supercluster named "Hyperion", the largest and the most massive structure in early universe known so far. Hyperion was found using data from VIMOS Ultra-Deep Survey done by VIMOS instrument on European Southern Observatory's (ESO) Very Large Telescope in Chile.
- Hyperion's mass is estimated to be a million billion times that of our own Sun (nearly 1,048 Jupiters, or 333,000 Earths). v. Hyperion is located in the constellation of Sextans.
88. ▶ Scientists at Institut National de la Recherche Scientifique (Canada) developed a new camera called the T-CUP, touted as world's fastest camera. It can capture 10 trillion frames per second. It can freeze time to see light in extremely slow motion.
89. ▶ Scientists at Rice University (US) developed tiny spheres that can catch and destroy bisphenol A (BPA), a synthetic chemical used to make plastics that often contaminates water. This new material helps in overcoming two significant technological barriers for photocatalytic water treatment.
- BPA is used to coat insides of food cans, bottle tops and water supply lines. BPA that seeps into food and drink is considered safe in low doses, but prolonged exposure is suspected of affecting the health of children and contributing to high blood pressure.
90. ▶ Scientists at University of Texas at San Antonio (UTSA) have set a new Guinness World Record by creating the smallest medical robot — a device measuring just 120 nanometres that could assist in future cancer and Alzheimer's treatments.
91. ▶ Scientists developed Aerogel, a transparent heat-resistant super-insulating gel using beer waste. It may be used to build greenhouse-like habitats for human colonization on extraterrestrial habitats.
- Aerogels defining feature is air, as it comprise at least 90% gas by weight. Their thin films are made up of crisscrossing patterns of solid material that trap air inside billions of tiny pores, similar to bubbles in bubble wrap. This trapping capacity makes them good insulators.
 - It could also be used on buildings on Earth to help make huge savings on energy costs. It enables to harvest sunlight through thermally-insulating material and store energy inside, protecting from big oscillations in temperature.
92. ▶ Scientists discovered a beetle trapped in amber that dates back to 99 million years, in Myanmar. It may help better understand relationship between ancient flowering plants and pollinators.
- It uncovers earliest definitive fossil evidence of relationship between cycads and insects. Cycads are a group of unusual evergreen gymnosperms that may have been first insect-pollinated plants.
 - The found beetle preserved in Burmese amber for an estimated 99 million years, is named *Cretoparacucujus cycadophilus*.

93. ▶ Scientists discovered an ancient fossil of Dickinsonia, earliest animal on geological record. Dickinsonia is an oval shaped creature that lived 558 million years ago. It grew up to 1.4 m in length. The fossil was discovered by researchers from Australian National University (ANU) near the White Sea in Russia.
94. ▶ Scientists discovered fossilized remains of a piranha-like species believed to be the earliest known example of a flesh-eating fish, found in South Germany. It lived about 150 million years ago.
95. ▶ Scientists from Australian National University (ANU) discovered world's oldest colours. 1.1 billion-year-old bright pink pigments, extracted from rocks deep beneath the Sahara desert in Africa, have finally been traced.
96. ▶ Scientists from Bombay Natural History Society (BNHS) and IISc Bangalore discovered 2 new species of lizards in Western Ghats. The Lizards are: Montane forest lizard and Spiny-headed forest lizard. They were wrongly identified under genus Calotes for over 150 years.
97. ▶ Scientists from Julich Research Centre (Germany) have developed a computer named "SpinNaker" that mimics human brain's neural networks, and would overcome speed and power consumption problems of conventional supercomputers. It would help to advance our knowledge of neural processing in brain, to include learning and disorders like epilepsy and Alzheimer's disease.
98. ▶ Scientists from Massachusetts Institute of Technology (US) have built and flown first-ever silent airplane with no moving propellers or jet turbines, called Ion Drive. It weighs about 5 pounds with five-meter wingspan. It was flown at distance of 60 meters, repeated 10 times. It is first-ever plane having no moving parts in propulsion system.
- ✏ It is powered by ionic wind or electrodynamic thrust, a silent but mighty flow of ions that is produced aboard plane. It can generate enough thrust to propel plane over sustained, steady flight.
99. ▶ Scientists from New Zealand performed world's first-ever 3-D, colour X-ray on human, with potential to improve medical diagnostics. The new device is based on the traditional black-and-white X-ray but incorporates particle-tracking technology called Medipix developed by European Organization for Nuclear Research (CERN).
100. ▶ Scientists from University of Manchester (England), have developed a non-antibiotic drug that can treat tuberculosis (TB) in humans effectively. Results revealed that compound does not kill bacteria directly, but results in a significant reduction in bacterial burden.
101. ▶ Scientists have developed world's fastest rotor, which will help in studying quantum mechanics. It can spin at more than 60 billion revolutions per minute, making it world's fastest man-made object. Spinning dumbbell functions as rotor, and vibrating dumbbell functions like instrument for measuring tiny forces and torques, known as a torsion balance.
102. ▶ Scientists identified new shape called *scutoid* while studying epithelial cells.
- ✏ Scutoid shape has five sides on one end and six on the other and a triangular surface on one of its longer edges. and It is completely new to geometry and resembles beetle's scutellum (shield-like structure) from top-down view.
 - ✏ It will help to explain how cells arrange themselves in tightly packed three-dimensional (3D) structures that serve as protective barriers in body. It will contribute to tissue engineering specifically development of artificial organs.
103. ▶ Search engine Google at its Cloud Next 2018 conference held in San Francisco unveiled two new Artificial Intelligence (AI) chips aimed at helping customers develop and deploy intelligent connected devices at scale. They are Edge TPU and Cloud IoT Edge.
- ✏ Edge TPU - A purpose-built application-specific integrated circuit (ASIC) designed to run AI at the edge. It will bring brain to devices at extremely low cost and high power efficiency without compromising performance.
 - ✏ Cloud IoT Edge - A software stack that extends Google Cloud's powerful AI capability to gateways and connected devices.
 - ✏ During the same conference, Google partnered with Accenture to help enterprises build Cloud solutions customised to their specific industries and needs through Accenture Google Cloud Business Group (ABG). It aims to help companies to build next generation business processes with Artificial Intelligence (AI) and Machine Learning (ML) based approaches to develop new value across enterprise.
104. ▶ Tamil Nadu State Animal Nilgiri tahr (a wild goat species) is Reportedly endangered as climate change may cause it to loose 60% of its habitat by 2030s, with just 2500 left in wild. It is endemic to Western Ghats from Nilgiris to Kanyakumari.
105. ▶ U.R. Rao Satellite Centre (URSC), ISRO's nodal satellites division has signed separate contracts with three vendors to outsource Spacecraft Assembly Integration and Testing (AIT) activities. Vendors are Alpha Design Technologies, Bharat Electronics Ltd (BEL) and Tata Advanced Systems.
- ✏ It aims to promote participation of Indian industry from spacecraft subsystems to spacecraft assembly, integration and testing. Under this, 27 spacecrafts will be made by July 2021.
106. ▶ US Scientists Scientists successfully grown oesophageal organoids, a miniature, functional versions of human food pipe using pluripotent stem cells (PSCs) in laboratory. It will help to study birth defects like esophageal atresia, organoids, eosinophilic esophagitis and Barrett's metaplasia.
- ✏ Oesophagus is long muscular tube part of digestive system that connects mouth to stomach to actively pass food. It is also called as gastro-intestinal tract (GI tract or gullet or food pipe). It is around 25cm long in adults.

107. ▶ US Scientists identified 3 new species of ancient primates that were earlier unknown, and have named them: *Ekwiiyemakius walshi*, *Gunneltarsius randalli* and *Brantomomys cerutti*. They lived 42 to 46 million years ago.
108. ▶ US scientists created a platinum-gold alloy, named as most wear-resistant metal in world. It is the first alloy in the same class as diamond and sapphire, and has been 100 times more durability than high-strength steel. With platinum-gold coating, several electronic products can be made more cost-effective, long-lasting and dependable.
109. ▶ USA Scientists claimed to have developed world's first bioelectronic medicine which is implantable, biodegradable wireless device that speeds nerve regeneration and improves healing of damaged nerve.
- ✎ It is controlled wirelessly by transmitter outside body that acts much like cellphone-charging mat. It operates for about two weeks before naturally absorbing into the body.
 - ✎ During its animal test on rats with injured sciatic nerves, it was found that this bioelectronic medicine device delivers regular pulses of electricity to damaged peripheral nerves in rats after surgical repair process. This results in accelerating regrowth of nerves.
 - ✎ Researchers envision that such transient engineered technologies can replace pharmaceutical treatments for a variety of medical conditions in humans.
110. ▶ USA based MIT (Massachusetts Institute of Technology) scientists have developed a method to mass produce robots the size of a cell named "Syncells" (synthetic cells), to be used to monitor interior of an oil or gas pipeline, or to detect disease in bloodstream. A process called "autoperforation" directs the fracture lines to produce miniscule pockets of a predictable size and shape.
111. ▶ USA's National Aeronautics and Space Administration (NASA) launched Parker Solar Probe, a \$1.5 billion spacecraft, aimed at looking after several factors of sun which are crucial to protect Earth by unveiling mysteries of dangerous solar storms.
- ✎ It is Humanity's first-ever mission to Touch the Sun. It will fly through Sun's atmosphere as close as 3.8 million miles from its surface, much closer than any spacecraft has come before.
 - ✎ Parker Solar Probe launched aboard a Delta IV-Heavy rocket from Cape Canaveral (USA).
 - ✎ It will use Venus' gravity during seven flybys over nearly seven years to gradually bring its orbit closer to Sun. Earth's average distance to Sun is 93 million miles.
 - ✎ Why won't it Melt -
 - ✎ Parker Solar Probe will provide unprecedented observations of what drives the wide range of particles, energy and heat that course through Sun's Corona, which has temperature of approx 6000 Degrees and sends particles outward into solar system.
 - ✎ Parker Solar Probe has can withstand extreme temperature and fluctuations, with its custom heat shield that helps protect mission it from Sun's intense light emission.
 - ✎ The key Lies in **concept of heat versus temperature** -
 - ✎ High temperatures do not always translate to actually heating another object. In space, temperature can be thousands of degrees without providing significant heat to a given object or feeling hot, as Temperature measures how fast particles are moving, whereas heat measures total amount of energy they transfer.
 - ✎ Particles may be moving fast (high temperature), but if there are very few of them, they won't transfer much energy (low heat). Since space is mostly empty, there are very few particles that can transfer energy to spacecraft.
 - ✎ Sun's Corona has an extremely high temperature but very low density, so spacecraft interacts with fewer hot particles and doesn't receive as much heat.
 - ✎ It Means that while Parker Solar Probe will be travelling through space with temperatures of several million degrees, surface of heat shield that faces the Sun will only get heated to about 1,400 degrees Celsius. Shield uses a Thermal Protection System, (8 feet (2.4 meters) in diameter and 4.5 inches (about 115 mm) thick), allowing the other side of shield, the spacecraft body to be at comfortable 30 C.
 - ✎ Other Facts about mission -
 - ✎ Naming - Eugene Newman Parker is person on whose name the Mission is named. In mid 1950s, he proposed a number of concepts about how stars — including our sun — give off energy. He called this cascade of energy the solar wind.
 - ✎ Cost is approx \$1.5 Billion USD.
 - ✎ In its seven-year mission, Probe will make six more Venus flybys and 24 total passes by Sun, journeying steadily closer to Sun until it makes its closest approach at 3.8 million miles (6.16 million km). It will be moving at roughly 430000 miles per hour, setting record of being the fastest human-made object ever.
 - ✎ It is expected to transmit its first science observations in December 2018.
112. ▶ University of Chicago (USA) identified a 'zombie' gene that makes elephants nearly immune to cancer. In response to DNA damage, a tumour-suppressing protein wakes up the non-functioning gene called LIF6 to kill cancer-prone cells.

113. ▶ World's first medical imaging scanner "Explorer" that can capture a 3D picture of the whole human body at once in 20-30 seconds, has started functioning. It has been developed by University of California (USA).
114. ▶ World's first robot citizen Sophia has been granted world's first robot visa for a world tour on behalf of her Hong Kong-based developer Hanson Robotics. She was issued electronic visa upon her arrival at Azerbaijan Baku International Airport. Sofia is in Azerbaijan for a tech conference, where she is a keynote speaker.
115. ▶ World's largest supercomputer Spiking Neural Network Architecture (SpiNNaker) machine designed to work in same way as human brain was switched on for first time, built at University of Manchester in UK. It can model more biological neurons in real time than any other machine on planet. It is capable of completing more than 200 million million actions per second, with each of its chips having 100 million transistors.
-  It is unique as it mimics the massively parallel communication architecture of brain, sending billions of small amounts of information simultaneously to thousands of different destinations. It has massive potential for neurological breakthroughs in science such as pharmaceutical testing.
116. ▶ World's oldest plant virus dating back 1,000 years named Zea mays chrysovirus 1(ZMVCV1) has been discovered at a Native American archeological site. The previous oldest was found about 750 years ago.
117. ▶ ZSL (Zoological Society of London) Institute of Zoology conferred title of 'world's largest bird' to Coombe titan (meaning 'big bird' in Malagasy and Greek), believed to have weighed up to 800 kg and 3 metres tall.
